

CLAVE DEL PRODUCTO: 8544

GENERALIDADES

Comercializador: Tecnobotánica de México
Tipo de documento: Ficha técnica
Fecha de elaboración del documento: 2018-11-23

Imagen del producto:

Clave del producto: 8544
Número de código de barras del producto: 7501600185447
Denominación del producto: DAMIANA DE CALIFORNIA
Marca: TESTICURE ®
Fabricante: FITOCEUTICOS, SA DE CV
Categoría del producto: SISTEMA REPRODUCTOR MASCULINO Y SUS SUPLEMENTOS
Contenido neto: 100 tabs.
Unidad de medida: 1,76 oz.
Estado físico: Tabletas
Contenido neto por cada dosis: 500 mg.
Vía de uso o administración: ADMINISTRACION ORAL
Instrucciones para su uso consumo: TOMAR DOS (2) TABLETAS TRES VECES AL DIA.
Instrucciones para su preparación: NO APLICA
Precauciones: MUJERES EMBARAZADAS O LACTANDO DEBERIAN CONSULTAR A UN MEDICO. ANTES DE USAR CUALQUIER PRODUCTO, NO
Necesidades de refrigeración: NO
Instrucciones para su conservación: GUARDESE EN UN LUGAR FRESCO Y SECO
Clave de producto SAT: 51191900
Unidad de medida SAT: U2

INFORMACION NUTRIMENTAL

ESPECIFICACIONES TÉCNICAS DEL PRODUCTO TERMINADO

Envase Primario		Envase Secundario	
Descripción:	FRASCO	Descripción:	CAJA
Dimensiones del envase:		Dimensiones del envase:	
Alto:	8.2 CM	Alto:	8.3 CM
Ancho:	4.5 CM	Ancho:	4.7 CM
Largo:	4.5 CM	Largo:	4.7 CM
Peso:	0.015 G	Peso:	0.006 G
Número de rosca de la tapa:	R-38		
Material del envase:	POLIETILENO	Material del envase:	CARTULINA SULFATADA
Color del envase:	BLANCO	Especificaciones del holograma:	HOLOGRAMA DE 15 MM TECNO BOTANICA
Color de la tapa:	BLANCA		
Otros componentes:	NO APLICA		
Arte de la etiqueta:			

Ingredientes:
 DAMIANA DE CALIFORNIA-HOJAS
 (*Turnera diffusa* var. *aphrodisiaca* Willd. ex Schult.),
 GARAFONA-PLANTA (*Castilleja tenuiflora* Benth.),
 DAMIANA DE SAN LUIS-PLANTA
 (*Turnera diffusa* Willd. ex Schult.),
 ZARZAPARRILLA DE PUEBLA-RAÍZ
 (*Platidium aquilinum* (L.) Kuhn in Kersten (1879),
 CORDO CORREDOR-PLANTA (*Eryngium campestre* L.),
 AGUACATE-HOJAS (*Persea americana* Mill. Var. *Crillo*),
 ALFALFA BASTARDA-RAÍZ (*Medicago sativa* L.).

Instrucciones para su Consumo:
 TOMAR DOS (2) TABLETAS 3 VECES AL DÍA.

PRECAUCIONES:
 MUJERES EMBARAZADAS O LACTANDO, DEBERÍAN
 CONSULTAR UN MÉDICO, ANTES DE CONSUMIR
 CUALQUIER PRODUCTO.
 NO SE USE SI ES INTOLERANTE O SENSIBLE
 A LOS INGREDIENTES.
 NO SE DEJE AL ALCANCE DE LOS NIÑOS.

INSTRUCCIONES PARA SU CONSERVACIÓN:
 GUÁRDASE EN UN LUGAR FRESCO Y SECO.

**ESTE PRODUCTO NO
 ES UN MEDICAMENTO.

ZARZAPARRILLA DE PUEBLA-RAÍZ (Pteridium aquilinum (L.) Kuhn in Kersten (1879)

CARDO CORREDOR-PLANTA (Eryngium campestre, L.)

AGUACATE-HOJA (Persea americana Mill. var. Criollo)

ALFALFA BASTARDA-RAÍZ (Medicago sativa, L.)

Información de los principales ingredientes:

Spermatorrhea (from the Greek words spérma, semen, and rhein, to spill) is a condition characterized by the involuntary release of semen from the penis. This release can be abundant or scant, but is always involuntary. It should not be confused with nocturnal emissions, as it is not ejaculation while asleep, but rather a continuous loss of semen while awake.

There may be pus present in the semen, which becomes foul-smelling and thick and sometimes yellow or green in color.

Spermatorrhea is caused by organic factors. In these cases, there is always inflammation or infection of the urethra, seminal vesicles, or prostate gland.

Spermatorrhea is not a way for the body to cleanse itself; it is a disease caused by organic factors, which, among other things, stem from infections or inflammations, and it is necessary to find the source of the infection.

True spermatorrhea occurs, for example, in cases of certain spinal cord injuries such as myelitis or spinal cord compression. It is also particularly common in neurasthenic individuals with melancholy, anxiety, and impotence. Each emission of semen increases the weakness and depression.

There is also a factor known as false spermatorrhea, and almost two-thirds of diagnosed cases of spermatorrhea are simply individuals with phosphaturic, milky urine, which is interpreted as sperm.

Or, individuals with emissions of prostatic fluid, produced during defecation, due to the pressure of the fecal bolus (generally constipated individuals) on the prostate.

This latter phenomenon, normal and useful, is in a large number of ill-informed young people the source of worries and depressions and, sometimes, of permanent disturbances in their sex life.

The "California Damiana" (Tumera diffusa var, aphrodisiaca Willd. ex Schl.) acts directly as a diuretic, but also causes excitement in all erogenous zones and helps to awaken the sexual appetite of the people who consume it.

It is used to enhance sexual relations thanks to its aphrodisiac properties. It is very effective in cases of impotence, premature ejaculation, vaginismus, testicular inflammation, or involuntary semen emission. It provides energy and vigor to the body without causing anxiety or overstimulation, so it can be used in the treatment of disorders affecting the central nervous system, such as exhaustion, mild depression, or seasonal affective disorder (SAD).
