

CLAVE DEL PRODUCTO: 9043

GENERALIDADES

Comercializador: Tecnobotánica de México
Tipo de documento: Ficha técnica
Fecha de elaboración del documento: 2018-11-23

Imagen del producto:

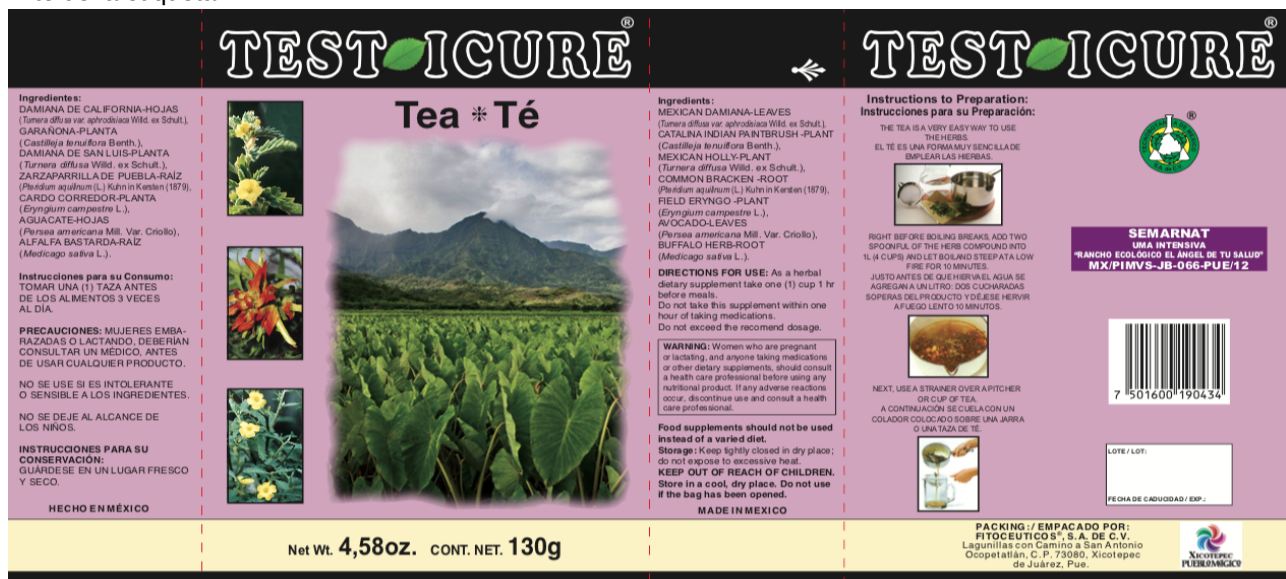

Clave del producto: 9043
Número de código de barras del producto: 7501600190434
Denominación del producto: DAMIANA DE CALIFORNIA
Marca: TESTICURE ®
Fabricante: FITOCEUTICOS, SA DE CV
Categoría del producto: SISTEMA REPRODUCTOR MASCULINO Y SUS SUPLEMENTOS
Contenido neto: 130 grs.
Unidad de medida: 4,58 oz.
Estado físico: Té
Contenido neto por cada dosis: NO APLICA
Vía de uso o administración: ADMINISTRACION ORAL
Instrucciones para su uso consumo: TOMAR UN (1) TAZA ANTES DE LOS ALIMENTOS 3 VECES AL DIA.
Instrucciones para su preparación: 1.-AGREGAR EN UN LITRO DE AGUA DOS CUCHARADAS SOPERAS DEL PRODUCTO Y DEJESE HERVIR A FUEGO LENTO<
Precauciones: MUJERES EMBARAZADAS O LACTANDO DEBERIAN CONSULTAR A UN MEDICO. ANTES DE USAR CUALQUIER PRODUCTO, NO
Necesidades de refrigeración: NO
Instrucciones para su conservación: GUARDESE EN UN LUGAR FRESCO Y SECO
Clave de producto SAT: 51191900
Unidad de medida SAT: CTG

INFORMACION NUTRIMENTAL

Información nutrimental por porción:

ESPECIFICACIONES TÉCNICAS DEL PRODUCTO TERMINADO

Envase Primario		Envase Secundario	
Descripción:	BOLSA	Descripción:	CAJA
Dimensiones del envase:		Dimensiones del envase:	
Alto:	15.5 CM	Alto:	13.5 CM
Ancho:	4.5 CM	Ancho:	4.5 CM
Largo:	8 CM	Largo:	9.5 CM
Peso:	0.005 G	Peso:	0.020 G
Número de rosca de la tapa:	NO APLICA	Material del envase:	CARTULINA SULFATADA
Material del envase:	POLIPROPILENO	Especificaciones del holograma:	HOLOGRAMA DE 15 MM TECNO BOTANICA
Color del envase:	NATURAL		
Color de la tapa:	NO APLICA		
Otros componentes:	NO APLICA		
Arte de la etiqueta:			

Peso unitario del producto terminado en gramos: 0.150 g

Empaque colectivo

Cantidad de piezas por empaque colectivo:	88 PZ
Descripción del empaque colectivo:	CAJA TIPO HUEVO CORRUGADA
Alto:	34.5 CM
Ancho:	30.5 CM
Largo:	59.5 CM
Peso:	0.975 G
Arte del empaque:	NO APLICA
Material del envase:	CARTON CORRUGADO
Peso total del empaque colectivo lleno del producto:	14.180 KG

INGREDIENTES

Ingredientes:

DAMIANA DE CALIFORNIA-HOJAS (Tumera diffusa var, aphrodisiaca Willd. ex Schl.)

GARAÑONA-PLANTA (Castilleja tenuiflora Benth.)

DAMIANA DE SAN LUIS-PLANTA (Tumera diffusa Willd. ex Schl.)

ZARZAPARRILLA DE PUEBLA-RAÍZ (Pteridium aquilinum (L.) Kuhn in Kersten (1879)

CARDO CORREDOR-PLANTA (Eryngium campestre, L.)

AGUACATE-HOJA (Persea americana Mill. var. Criollo)

ALFALFA BASTARDA-RAÍZ (Medicago sativa, L.)

Información de los principales ingredientes:

Spermatorrhea (from the Greek words spérma, semen, and rhein, to spill) is a condition characterized by the involuntary release of semen from the penis. This release can be abundant or scant, but is always involuntary. It should not be confused with nocturnal emissions, as it is not ejaculation while asleep, but rather a continuous loss of semen while awake.

There may be pus present in the semen, which becomes foul-smelling and thick and sometimes yellow or green in color.

Spermatorrhea is caused by organic factors. In these cases, there is always inflammation or infection of the urethra, seminal vesicles, or prostate gland.

Spermatorrhea is not a way for the body to cleanse itself; it is a disease caused by organic factors, which, among other things, stem from infections or inflammations, and it is necessary to find the source of the infection.

True spermatorrhea occurs, for example, in cases of certain spinal cord injuries such as myelitis or spinal cord compression. It is also particularly common in neurasthenic individuals with melancholy, anxiety, and impotence. Each emission of semen increases the weakness and depression.

There is also a factor known as false spermatorrhea, and almost two-thirds of diagnosed cases of spermatorrhea are simply individuals with phosphaturic, milky urine, which is interpreted as sperm.

Or, individuals with emissions of prostatic fluid, produced during defecation, due to the pressure of the fecal bolus (generally constipated individuals) on the prostate.

This latter phenomenon, normal and useful, is in a large number of ill-informed young people the source of worries and depressions and, sometimes, of permanent disturbances in their sex life.

The "California Damiana" (Tumera diffusa var, aphrodisiaca Willd. ex Schl.) acts directly as a diuretic, but also causes excitement in all erogenous zones and helps to awaken the sexual appetite of the people who consume it.

It is used to enhance sexual relations thanks to its aphrodisiac properties. It is very effective in cases of impotence, premature ejaculation, vaginismus, testicular inflammation, or involuntary semen emission. It provides energy and vigor to the body without causing anxiety or overstimulation, so it can be used in the treatment of disorders affecting the central nervous system, such as exhaustion, mild depression, or seasonal affective disorder (SAD).
